

Fujiyoshida City Area

Mt. Fuji Volcanic Disaster Prevention Map

Snow Season.

Approx October through May, however the most caution is urged from February through April when large amounts of snow have accumulated.

Mudflow Evacuation Zone.

This area has a high risk of being hit by mudflows during snow season.

- *When Volcanic Advisories have been issued this area must **prepare to be evacuated**. Elderly and disabled persons must **evacuate** in advance.
- *When a Volcanic Alert has been issued, this area must **evacuate immediately**.

In the event that the danger of mudflows rises, move immediately to high ground.

Evacuation Zone 3.

Lava flows may reach this area within one day of eruptions.

- *When Volcanic Advisories have been issued, this area must **prepare to be evacuated**. Elderly and disabled persons must **evacuate** in advance.
- *When a Volcanic Alert has been issued, immediate **evacuation is recommended**.

Mudflow Zones within Evacuation Zone 3.

- *Lava flows may overtake this area within one day.
- *Mudflows will reach this area in the event of an eruption during snow season.
